

Screenshots show how my web extension works

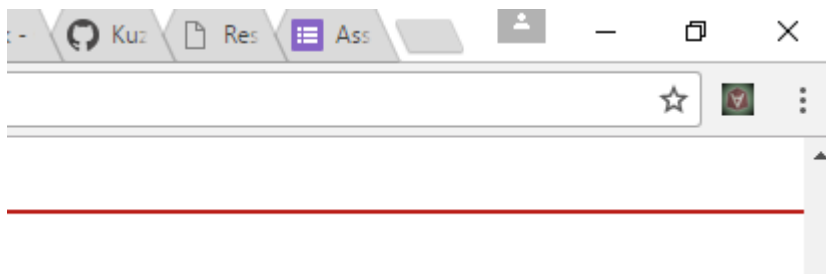

1. This is the screen shot when I have loaded my extension to the Google Chrome browser. Simply load "chrome://extensions/" into your browser, this opens for you any extension page where you have to tick or turn on the Developer mode position. After clicking load unpacked extension which will open for you a popup window where you locate your folder having your extension.

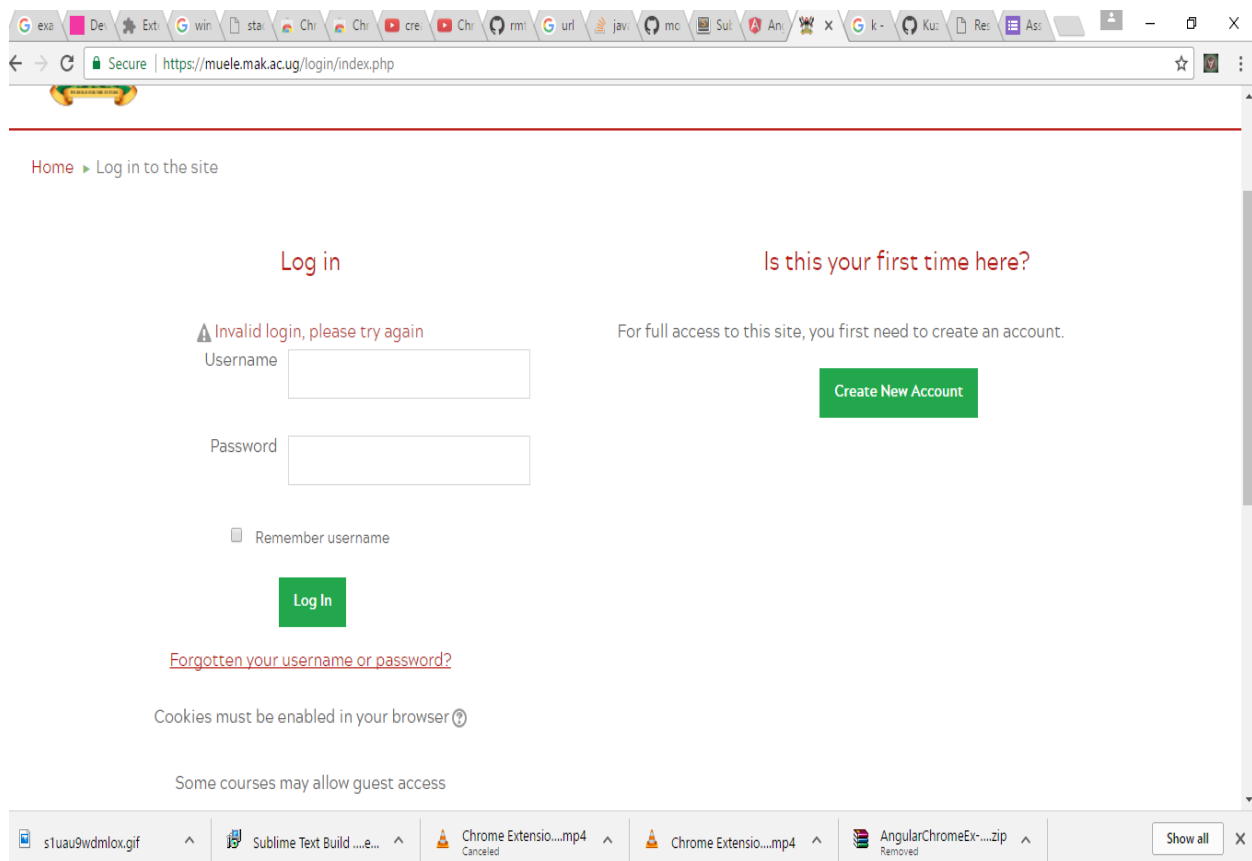

2. This is the screen shot after my extension has been loaded the Chrome browser

3. This one shows the icon of my extension loaded or added to the extension tab of Chrome

4. Here I open any web page that I want to use my extension to get its https contained. For this example I am using www.muele.mak.ac.ug

5. This one shows the results after using the extension. I am given all the http's within the muele web page.

The screenshot shows a web browser window with the address bar displaying <https://muele.mak.ac.ug/login/index.php>. The page content includes a navigation bar with "Home" and "Log in to the site". The main heading is "Log in" in red. Below it, there is a red warning message: "Invalid login, please try again". The login form consists of "Username" and "Password" input fields, a "Remember username" checkbox, and a green "Log In" button. Below the button, there is a link "Forgotten your username or password?". At the bottom, it says "Cookies must be enabled in your browser" and "Some courses may allow guest access".

On the right side, a web extension overlay is visible. It contains the following text:

We can now use this extension to get all the https within any WEB PAGE, simply open that web page for example "muele.mak.ac.ug" and tap on this extension. it will give you all the https within that web page

THE POWER OF WEB EXTENSIONS

Delevoped using javascript with angular lib
